**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 26-44 are rejected under 35 U.S.C. 102(e) as being anticipated by Coffey et al (6,830,443 B1).

Coffey et al teach a filter element (10) comprising a filter media (12) including the first material (col. 4, lines 20-26) wherein the filter media (12) includes a clean side (12b), and a seal (14) including a second material (col. 4, lines 27-34) bonded to the clean side (12b) wherein the seal (14) is bonded to a perimeter of the clean side face (12b) to form a flange portion integral with the filter media (12) (see col. 1, lines 50-51, col. 3, lines 23-25). Coffey et al also teach the first material of the filter media including synthetic fabric material such as nylon, polyester, cotton, etc. (see col. 4, lines 20-26), and the second material including urethane, or ethylene-propylenediene modified rubber, or polyurethane, etc. (see col. 4, lines 27-34). Coffey et al further teach the seal (14) having a flexible portion (16) extending from the flange portion (see col. 4, lines 35-41) that is adapted to be compressed by a lid (6) of the filter housing (1). Coffey et al also teach a method of manufacturing a filter element comprising the steps of injecting a second material directly onto the first material filter media to form a seal.
